### DETAILED ACTION

1. Applicant's amendment, filed on February 13, 2006, is acknowledged.

Claims 3-21 have been canceled.

Claims 22-42 have been added.

Claims 1, 2, and 22-42 are pending.

### *Species Election*

2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Applicant is required to elect one specific human or humanized or chimeric monoclonal antibody, wherein the antibody:

A) has an ability to induce specific cytokines (e.g. TNF as recited in claim 24), **AND**

B) is directed against specific antigen (e.g. Rhesus D of human blood cells as recited in claim 30).

These species do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for following reasons:

Harris et al. (US Patent 5,607,847) teach humanized antibody produced in rat myeloma cell, YB2/0 (e.g. see Example 3 on columns 7-9). Given that the referenced humanized antibody is produced in the same host cells as the claimed antibody (e.g. see instant claim 36), the referenced humanized antibody would inherently have the same functions (e.g. an Fc gamma RIII(CD16)-type ADCC of greater than 60% compared with the same antibody produced in CHO line) as the claimed humanized antibody.

Since Applicant's inventions do not contribute a special technical feature when viewed over the prior art they do not have a single general inventive concept and so lack unity of invention.

These species do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

3. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

*Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.*

4. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chun Crowder whose telephone number is 571-272-8142.
